PROFESSIONAL SUMMARY

Full-Stack Developer who has shipped production features including a Groq-powered streaming AI chatbot with live inventory injection and an SSLCommerz payment system with a custom cross-origin auth proxy, built across two end-to-end TypeScript platforms using Next.js, Node.js, and PostgreSQL. Experienced in REST API design, relational schema design, JWT and session-based auth, RBAC, and cloud deployment on Vercel, Render, and Railway.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Frontend: React.js, Next.js, Tailwind CSS, Framer Motion, GSAP, Responsive UI/UX Design

Backend: Node.js, Express.js, REST API Design, Role-Based Access Control (RBAC)

Database: PostgreSQL, Prisma ORM, Relational Schema Design

Auth & Security: Session-based auth via Better Auth, JWT, Refresh Token Rotation, OAuth (Google)

Caching: Next.js ISR

Tools & Deploy: Git, GitHub, Postman, Docker, Vercel, Render, Railway, Agile/Scrum

Soft Skills: Problem Solving, Adaptability, Team Collaboration.

PROJECTS

MediStore - Full-Stack Medicine E-Commerce Platform

[Live](#) | [Frontend Repo](#) | [Backend Repo](#)

Production-deployed OTC medicine platform built on a decoupled Next.js frontend and Express REST API, serving Customer, Seller, and Admin roles across a full order lifecycle with integrated payment and AI assistant.

- **Designed** a 7-model PostgreSQL schema and implemented atomic order creation via Prisma `$transaction`, validating stock, snapshotting prices, and decrementing inventory in a single operation; enforced **PLACED** → **PROCESSING** → **SHIPPED** → **DELIVERED** status transitions with stock auto-restoration on cancellation and RBAC via Better Auth.
- **Resolved** cross-origin cookie auth for SSLCommerz payment by architecting a Next.js API proxy route with a custom `x-session-token` header; supports Cash on Delivery and Online flows with full **PaymentStatus** tracking (**PENDING / PAID / FAILED / CANCELLED**).
- **Shipped** a streaming AI chatbot on Next.js Edge Runtime powered by Groq's Llama 3.3 70B, injecting live inventory context (200+ medicines, 60s ISR revalidation) per request and streaming responses via SSE; deployed on Vercel and Render.

Tech: TypeScript · Next.js · Node.js · Express.js · PostgreSQL · Prisma ORM · Better Auth · TanStack Query · Tailwind CSS · Recharts · Groq API · SSLCommerz · Vercel · Render

Vroom - Full-Stack Vehicle Rental Management System

[Live](#) | [Frontend Repo](#) | [Backend Repo](#)

Production-deployed vehicle rental platform with multi-role access for Admin and Customer, handling bookings, real-time availability, fleet management, and revenue analytics end to end.

- **Implemented** atomic booking creation via Prisma `$transaction`, validating availability, computing `days × daily_rent_price`, and flipping vehicle status to **booked** in one operation; an automated expiry job batch-processes overdue bookings back to **returned** and restores fleet availability without manual intervention.
- **Built** JWT Bearer auth with refresh token rotation and role-scoped Express middleware (`authorizeAdmin / authorizeCustomer`), extending the typed `Request` with `JwtPayload`; integrated Google OAuth for social login, with customers scoped strictly to their own bookings and admins holding full fleet oversight.
- **Delivered** an admin analytics dashboard powered by 7 parallel **Promise.all** Prisma queries for real-time fleet and revenue KPIs, plus a raw SQL monthly revenue chart grouped by year; deployed frontend on Vercel and backend on Railway.

Tech: TypeScript · React.js · Node.js · Express.js · PostgreSQL · Prisma ORM · JWT · Google OAuth · Tailwind CSS · Vercel · Railway

EDUCATION

B.Sc. in Computer Science & Engineering, Green University of Bangladesh, Dhaka | 2026

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems, Object-Oriented Programming, Software Engineering
